

# **Kako isključiti Open File - Security Warning u Windows-u**

Svima se desilo da vas Windows pita da li sigurno želite da pokrenete program sa radne stанице.  
Postoje dva načina da se to isključi:

a) Run gpedit.msc, go to Local Computer Policy\>User Configuration\Administrative Templates\Windows Components\Attachment Manager  
enable "Default risk level for file attachments" (dvoklik daje izbor opcije enable/disable),  
then enable "Inclusion list for low risk file types"  
and add ".bat; xapp.exe; app.exe" to this list.

ili drugi, lakši način (ali ne uspeva uvek):

b) Control panel -> Internet options -> Security -> Local intranet -> Sites -> i isključite  
Automatically detect intranet network.
